

# For buyers

Efficient ordering – from need to delivery

## Efficient ordering

As a buyer, you need predictability, quality and control over costs. At Pla-Mek®, you get a partner who delivers technically advanced plastic components with a high degree of automation – and an equally high degree of availability. Here you get an overview of what we need from you to give you a precise delivery, and what you can expect from us. The earlier we get into the process, the better we can optimize the solutions together.

### **To provide you with accurate delivery and predictable production, we need:**

- Komplette tegningsunderlag og kravspesifikasjon
- Complete drawing documentation and requirement specification
- Estimated annual volume and expected series size
- Desired delivery schedule
- Information on the relationship between investment cost and unit price
- Any environmental requirements (e.g. use of recycled material, CO<sub>2</sub> calculations)
- Do you want added value? We offer additional services such as consulting, design assistance and optimization of casting tools.

Please contact us to find the solution that best suits your business.
